

ORCHARD BRUSH PROCESSORS HYDRAULIC DRIVEN, SKID STEER MOUNT

Certain crops produce very high quantities of prunings. This can cause big problems when it is time to mulch them. Burning is often illegal and is always bad for the environment. The Pick-Up Brush Processor provides a perfect solution - picking up the prunings with a pick-up rotor at ground level and adjustable upper feed rotor. The prunings are then processed within a screen to produce a fine and uniform mulch. This results in a fast biodegradation, just one cultivation cycle. Processor Pick-Up is particularly suitable for almond, olive, walnut and citrus shredding and stony conditions. It collects and mulches 100% of the prunings in one single pass.

Prunings are lifted from the ground and processed through a screen; therefore no contact between the hammers and stones. Pick-up mulcher, with power feed to mulch dense rows of prunings up to 3 inch in diameter.

ORCHARD BRUSH PROCESSOR

FEATURES:

- ❑ Skid Steer quick attach mount, hydraulic driven
- ❑ Variable speed hydraulic motor produces maximum flow of 39.6 GPM at operating pressure of 3600 PSI
- ❑ 2 hydraulic driven pick-up feed rotors
- ❑ Upper feed rotor hydraulically adjusts for the height of the brush pile
- ❑ 4 - 7.00 - 8 air tires with 5 bolt hubs guage wheels to add stability
- ❑ 2 full length side skids
- ❑ Processes brush up to 3 inches in diameter
- ❑ Heavy plate screen with 1 inch diameter diamond shaped holes for final processing
- ❑ Maximum working speed up to 3 MPH
- ❑ Fitted with swinging drop forged hammer knives
- ❑ 5 belt final drive to rotor
- ❑ 2 large gauges readable from the skid steer. One for shredding rotor pressure, one for the pick-up rotors pressure
- ❑ Control box with switches operated from the skid steer platform
- ❑ Rear mounted heavy chain shielding

TWO DEPTH WHEELS AND SIDE SKIDS

VARIABLE SPEED HYDRAULIC MOTOR

POWER FEED TO DUAL PICK-UP ROTORS
