

**SPEDO IN-RROW CULTIVATOR
IN-RROW MAINTENANCE TOOLS FOR VINEYARDS**

Very effective tools for under vine maintenance. This in-row blade undercuts weeds, while at the same time loosening and turning back the soil. The cutting blade hydraulically retracts around the base of the vine without damage. The unit was developed for one side weeding only, so as to operate at higher speeds with safe, accurate control. Also, standard is cable control from tractor seat to allow for blade retraction when required.

Many options are available: Retractable power disc, back-fill disc, retractable rotary berm hoe with wire brush, hydraulic kit for power tools, and hydraulic kit with oil tank and oil cooler.

Manufactured by Spedo

FEATURES:

- Cat. I and II, 3-point hitch
- Clevis lower link brackets
- Double tubing main frame
- Manual sliding tube to adjust for different row widths
- Hydraulic blade trip retraction system
- The blade is equipped with turnbuckle tilt
- PTO mounted hydraulic pump
- Simple two hose coupler connection to tractor
- Sensor rod to trip blade
- Cable control from tractor seat to allow for blade retraction when required
- 31" Long blade
- Coulter disc
- Dual gauge wheels with mud scrapers
- Dual parking stands

- OPTIONS:**
- Power Disc - 3 blades 11.8" dia. (retractable)
 - Back-Fill Disc - 2 blades 13.7" dia.
 - Rotary Berm Hoe - with wire brush (retractable)
 - Hydraulic kit for power tools
 - Hydraulic kit with oil tank and oil cooler
 - Hydraulic blade tilt
